It's the ultimate remedy for radar-guided missiles. The AN/ALQ-131 is one of the most successful and widely used active electronic countermeasures (ECM) systems in the world. This combat-proven asset from Northrop Grumman Electronic Systems is currently undergoing a mid-life upgrade. Technology improvements include a more powerful transmitter, greater effectiveness against modern missiles, netcentric capabilities and reduced cost of ownership. For fighter pilots, like those who fly the F-16, the upgraded AN/ALQ-131 is an investment they can live with.
